# Addendum to Four Seasons Motorized Shade Instuctions: Cord Idler Bars for Low Hanging Motor Tubes

When motor tubes are mounted well below the plane of the shade tracks, the addition of cord idler bars will elevate the shade cords off the back of the shades and guide them to the motor tube. This prevents cord tension against the upper shade battens.

1. After installation of motor tubes: Mount the idler bars into the shade tracks, above the glider access holes and above front of motor tube.

   Drill hole and insert first screw in track above motor tube, each side of window bay. Insert idler bar gliders into tracks and secure against first screw with a 2nd screw in front of glider, each side.

... and right side.

2. Cords from shades run over idler bar and down to the motor tube, then are wrapped and clipped per the primary instructions.
